#### `badCalculator.py`

1. KISS: I violated this rule by writing unnecessarily complicated functions with loops that make no sense.
2. DRY: I violated this rule by repeating code for different functions that did not need to be repeated.
3. Documentation: I wrote a lot of smelly comments in my bad code.
4. Refactoring: I had way too many comments that were not needed.

#### `goodCalculator.py`

1. KISS: This rule was shown by writing the code as simply as possible
2. YAGNI: I only wrote exactly what I needed to.
3. Documentation: I added solid comments where they were needed.
4. Cleanliness: The code is as well organized as I can make it.
